Python Essentials 1

Luis Renan Pavanello

Engineer, Full Stack Developer
Paraguai

Resumo

Full Stack Developer and Independent Technology Consultant with 9+ years of experience building scalable web products across education, fintech, and software. I specialize in backend architecture, database optimization, API integrations, and maintainable full-stack delivery using PHP/Laravel, Python/Django, and modern JavaScript stacks including React, Node.js, and TypeScript. Alongside product development, I have provided remote technology consulting for international clients and contributed to specialized AI evaluation and training engagements for LinkedIn/AnyoneAI. This work included creating high-quality benchmark datasets, detailed annotations, and real-world developer workflows to help improve coding agents and code-editing models. I enjoy turning complex requirements into reliable products through technical rigor, pragmatic problem-solving, and agile collaboration. Fluent in Portuguese, English, and Spanish, I am open to opportunities involving backend systems, full-stack development, fintech, developer tools, and AI-enabled products. Fluent in English, Spanish, and Portuguese, I'm always eager to connect with like-minded professionals and explore opportunities to innovate and grow. Let's build something amazing together! Experiência

MUON CORE LTD

Back End Developer

agosto de 2026 - Present (2 meses)

Londres

Backend Developer focused on designing, developing, and maintaining scalable backend services and APIs. Collaborating with a distributed team to build reliable software solutions while following engineering best practices.

- Develop backend services using Node.js, NestJS, and TypeScript.
- Design REST APIs and integrate with PostgreSQL and Redis.

- Deploy and maintain cloud infrastructure on AWS.
- Participate in architecture discussions and code reviews.
- Collaborate in an Agile development environment.

acapuedo

Full Stack Developer

fevereiro de 2026 - julho de 2026 (6 meses)

Distrito Capital, Paraguai

Company Description: A leading financial technology company in South America, managing the complete Acapuedo Fintech Ecosystem, including the core payment processing API and the administrative frontend.

Engineered and maintained both the backend API (Laravel 10) and the frontend admin UI (Blade/Livewire) for a comprehensive fintech platform handling payments, transactions, and merchant management; developed core backend services such as BalanceService and CashoutService and integrated 70+ external payment and telecom providers using a custom factory pattern to ensure robust financial operations; built the admin interface with dynamic data tables and charts (DataTables, Chart.js) to enable efficient management of merchants, users, and financial reports; designed a custom PDO-based database layer to replace Eloquent ORM, optimizing MySQL queries for high-volume financial transactions; implemented secure token-based authentication (JWT) for the API and role-based access control (admin/sales) for the frontend; maintained high code quality through static analysis (PHPStan) and extensive unit and feature testing (PHPUnit); and collaborated in an Agile environment, contributing to all stages of the software development lifecycle from requirements gathering to deployment.

Technical Environment: Laravel 10, PHP 8.1+, MySQL, Livewire 2.5, Blade, Bootstrap 4, jQuery, DataTables, Git, PHPUnit, PHPStan, JWT, REST APIs.

Universidad del Pacífico Paraguay

Developer React Senior

dezembro de 2023 - fevereiro de 2026 (2 anos 3 meses)

Distrito Capital de Paraguay, Paraguai

As a developer, I collaborated on the transformation of Universidad del Pacífico's digital infrastructure by designing and implementing two interconnected systems. The first is an Academic Management System built with Python, Django, and PostgreSQL, serving as the institutional backbone for all core academic operations—including student enrollment, course

management, grade processing, and regulatory compliance. This system handles over 10,000 daily transactions with exceptional reliability, replacing outdated legacy systems and reducing administrative workload by nearly half.

To complement this system, I developed a modern Campus Portal Ecosystem using the PERN stack (PostgreSQL, Express.js, React, Node.js), delivering responsive, user-friendly interfaces for students, faculty, and administrators. The portal features real-time grade tracking, interactive course dashboards, and automated reporting tools, all securely connected to the main academic system via RESTful APIs and WebSocket connections. The React-based frontend, styled with Bootstrap, ensures a consistent, mobile-ready experience across all devices.

These systems work seamlessly together through carefully designed integration points, including scheduled data synchronization, API bridges between Django and Express.js, and real-time notifications. Supporting over 5,000 daily users, the solution achieves 92% satisfaction rates while maintaining perfect data consistency. By leveraging Django's robustness for backend operations and the PERN stack's flexibility for frontend interfaces, we reduced IT support requests by 60% within the first year, delivering a modern, high-performance academic management environment.

Key technologies: Python, Django, PostgreSQL, JavaScript, React, Node.js, RESTful APIs, WebSockets, Bootstrap, Docker.

University of Pacific

Javascript Developer

dezembro de 2023 - fevereiro de 2026 (2 anos 3 meses)

At Pacifico University, Pacifico served as a React Senior Developer. During this time, he led projects utilizing the PERN stack (PostgreSQL, Express, ReactJS, Node.js), contributing to the development of robust and efficient web applications (Agile Environment). Additionally, he actively participated in a project integrated with Python, Django, and PostgreSQL, showcasing his versatility and ability to work with a variety of technologies to meet the university's needs.

Microverse

10 meses

Full Stack Engineer

janeiro de 2023 - outubro de 2023 (10 meses)

As a Full Stack Developer at Microverse, my job is to design, develop, and maintain the software applications that power Microverse's online learning platform, (AngularJS, ReactJS, JavaScript, Node.js, MongoDB).

Web Developer

fevereiro de 2023 - julho de 2023 (6 meses)

California, United States

As a Web Developer at Microverse, I collaborated in a fully remote, global team to design, develop, and deploy full-stack web applications using modern technologies. During this intensive program, I worked on real-world projects with pair programming and Agile methodologies, refining my skills in JavaScript, React, Ruby on Rails, and PostgreSQL.

I contributed to building scalable, responsive web apps while following best practices in clean code, testing, and DevOps. My experience included:

Developing RESTful APIs and integrating them with frontend frameworks

Implementing user authentication, database optimization, and CI/CD pipelines

Practicing remote collaboration with developers across different time zones

This role strengthened my ability to deliver high-quality, maintainable code in a professional environment while adapting to Agile workflows and peer code reviews.

(Technologies: JavaScript, React, Ruby on Rails, PostgreSQL, Git, GitHub Actions, Jest, RSpec)

NexusTech Solutions LLC

Full Stack Developer

janeiro de 2020 - dezembro de 2022 (3 anos)

Paraguay

At NexusTech Solutions, a remote-first software development company based in South America, I worked as a Full Stack Developer specializing in the PERN stack (PostgreSQL, Express, ReactJS, Node.js) and Python with Django. My responsibilities included designing and implementing scalable web applications, optimizing database performance with PostgreSQL, and collaborating with cross-functional teams to deliver high-quality solutions for clients across the region.*

NexusTech Solutions

Full Stack Engineer

janeiro de 2020 - dezembro de 2022 (3 anos)

At NexusTech Solutions, a remote-first software development company based in South America, I worked as a Full Stack Developer specializing in the PERN stack (PostgreSQL, Express, ReactJS, AngularJS, Node.js) and Python with Django.

Revolut

Python Developer

dezembro de 2018 - dezembro de 2019 (1 ano 1 mês)

São Paulo, Brasil

Revolut is a fintech company that offers banking services.

We offer currency exchange accounts, debit cards, virtual cards, and safe deposit boxes. Improved communication and organization of industrial client companies for whom we work by collaborating with Web Application Engineers.

Visualized over 40 datasets with Matplotlib.

Engaged in processing streaming data and batch data using Apache Spark. We used Spark in production from one day for real-time bid optimization and real time analytics.

Deliver projects with 1-2 days turnaround time or even within hours.

Tech stack: Python, AWS Cloud Cassandra, Matplotlib, Apache Spark Delivering.

Lauzon Consulting

Python Developer Jr

dezembro de 2015 - janeiro de 2017 (1 ano 2 meses)

São Paulo, Brasil

Lauzon is a financial company headquartered in São Paulo, Brazil.

They serve many local companies and startups by providing customized financial software.

Reduced 25% of the time dedicated to data collection by developing internal tools for text mining (sentimental analysis), and a web crawler for data collection using Python and SQL.

In lauzon teamwork, we use AWS Elastic Beanstalk service to deploy and scale applications and web services built with Java, Python Shell script development, and Python programs to automate data flow in daily tasks in small startups optimizing the work of one week to just two days.

Analyzed the SQL scripts and designed the solution to develop a custom ETL pipeline using Python.

Collaborated with many local businesses and startups by providing custom finance software. Made over 800 insertions and 150 deletions to 4 central Firmware repositories in less than 3 months.

Participated in more than 4 projects per year from initial research and conceptual design through testing and implementation phases.

Increased by 30% data quality by developing a data quality portal using Python scripting.

Communicated and coordinated with the project manager and coworkers to resolve 30+ build breaks a month.

Tech stack: Python

Formação acadêmica

University Of Santa Catarina

Bachelor Degree Engineering, Development · (janeiro de 2009 - janeiro de 2014)

Universidade Federal de Santa Catarina

Bachelor of Engineering, Industrial Engineering
